QUESTION 31 You are designing a solution that will interact with non-Windows applications over unreliable network connections. You have a security token for each non-Windows application. You need to ensure that non-Windows applications retrieve messages from the solution. Where should you retrieve messages? A. An Azure Queue B. The Azure Service Bus Queue C. An Azure blob storage container that has a private access policy D. Azure Table storage Answer: B Explanation:

<http://azure.microsoft.com/en-gb/documentation/articles/fundamentals-service-bus-hybrid-solutions/> QUESTION 32 You are the administrator for a company named Contoso, Ltd. Contoso also has an Azure subscription and uses many on-premises Active Directory products as roles in Windows Server including the following:- Active Directory Domain Services (AD DS)- Active Directory Certificate Services (AD CS)- Active Directory Rights Management Services (AD RMS) Active Directory Lightweight Directory Services (AD LDS) Active Directory Federation Services (AD FS). Contoso must use the directory management services available in Azure Active Directory. You need to provide information to Contoso on the similarities and differences between Azure Active Directory and the Windows Server Active Directory family of services. Which feature does Azure Active Directory and on-premises Active Directory both support? A. Using the Graph API to query the directory B. Issuing user certificates C. Supporting single sign-on (SSO) D. Querying the directory with LDAP Answer: C Explanation:

<http://justazure.com/azure-active-directory-part-5-graph-api/>  
<http://windowsitpro.com/azure/azure-active-directory-vs-premises-active-directory>  
<https://technet.microsoft.com/en-gb/windowsserver/dd448613.aspx?f=255&MSPPErr=-2147217396> QUESTION 33 A company has a very large dataset that includes sensitive information. The dataset is over 30 TB in size. You have a standard business-class ISP internet connection that is rated at 100 megabits/second. You have 10 4-TB hard drives that are approved to work with the Azure Import/Export Service. You need to migrate the dataset to Azure.- The solution must meet the following requirements:- The dataset must be transmitted securely to Azure.- Network bandwidth must not increase.- Hardware costs must be minimized. What should you do? A. Prepare the drives with the Azure Import/Export tool and then create the import job. Ship the drives to Microsoft via a supported carrier service. B. Create an export job and then encrypt the data on the drives by using the Advanced Encryption Standard (AES). Create a destination Blob to store the export data. C. Create an import job and then encrypt the data on the drives by using the Advanced Encryption Standard (AES). Create a destination Blob to store the import data. D. Prepare the drives by using Sysprep.exe and then create the import job. Ship the drives to Microsoft via a supported carrier service. Answer: A Explanation:

<http://azure.microsoft.com/en-gb/documentation/articles/storage-import-export-service/> QUESTION 34 You have an Azure website that runs on several instances. You have a WebJob that provides additional functionality to the website. The WebJob must run on all instances of the website. You need to ensure that the WebJob runs even when the website is idle for long periods of time. How should you create and configure the WebJob object? To answer, select the appropriate options in the answer area. Hot Area:

Answer Area

Requirement	Action
Create the WebJob object	<ul style="list-style-type: none"> <li>Create the WebJob as a scheduled task.</li> <li>Create the WebJob as an on-demand task.</li> <li>Create the WebJob as a continuous running task.</li> </ul>
Configure the WebJob object	<ul style="list-style-type: none"> <li>Enable AlwaysOn for the website.</li> <li>Enable AlwaysOn for the database.</li> <li>Configure the WebJob to run continuously.</li> </ul>

Explanation: <http://azure.microsoft.com/en-gb/documentation/articles/storage-import-export-service/> QUESTION 34 You have an Azure website that runs on several instances. You have a WebJob that provides additional functionality to the website. The WebJob must run on all instances of the website. You need to ensure that the WebJob runs even when the website is idle for long periods of time. How should you create and configure the WebJob object? To answer, select the appropriate options in the answer area. Hot Area:

Answer Area

Requirement	Action
Create the WebJob object	<ul style="list-style-type: none"> <li>Create the WebJob as a scheduled task.</li> <li>Create the WebJob as an on-demand task.</li> <li>Create the WebJob as a continuous running task.</li> </ul>
Configure the WebJob object	<ul style="list-style-type: none"> <li>Enable AlwaysOn for the website.</li> <li>Enable AlwaysOn for the database.</li> <li>Configure the WebJob to run continuously.</li> </ul>

Answer: **Answer Area**

Requirement	Action
Create the WebJob object	<ul style="list-style-type: none"> <li>Create the WebJob as a scheduled task.</li> <li>Create the WebJob as an on-demand task.</li> <li>Create the WebJob as a continuous running task.</li> </ul>
Configure the WebJob object	<ul style="list-style-type: none"> <li>Enable AlwaysOn for the website.</li> <li>Enable AlwaysOn for the database.</li> <li>Configure the WebJob to run continuously.</li> </ul>

Explanation: <http://azure.microsoft.com/en-us/documentation/articles/web-sites-create-web-jobs/> QUESTION 35 You have a website that displays text, pictures, video files, and audio files. The website processes requests from countries and regions all over the world. You plan to migrate the website to the Azure platform. The website has the following requirements:- Encode, store, and stream audio and video at scale.- Load-balance communications with the website instance that is closest to the user's location.- Deliver content with high-bandwidth and low latency. You need to recommend the technologies to implement the solution. Which technologies should you recommend? To answer, drag the appropriate technology to the correct requirement. Each technology may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Select and Place:

- Technologies**
- TrafficManager
  - MediaServices
  - Multifactor Authentication
  - Service Bus
  - Azure Active Directory
  - Azure Content Delivery Network
  - Windows Network Load Balancing
  - Azure Blob Service

Answer: **Technologies**

Requirement	Technology
Encode media	MediaServices
Load-balanced communication	TrafficManager
	Azure Content Delivery Network

Explanation: <http://azure.microsoft.com/en-gb/services/media-services/> <http://azure.microsoft.com/en-gb/services/> QUESTION 36 You are designing a Windows Azure application that will use Windows Azure Table storage. The application will allow teams of users to collaborate on projects. Each user is a member of only one team. You have the following requirements:- Ensure that each user can efficiently query records related to his or her team's projects.- Minimize data access latency. You need to recommend an approach for partitioning table storage entities. What should you recommend? A. Partition by user. B. Partition by team. C. Partition by project. D. Partition by the current date. Answer: B QUESTION 37 You are designing a Windows Azure application that will store data in two SQL Azure databases. The application will insert data in both databases as part of a single logical operation. You need to recommend an approach for maintaining data consistency across the databases. What should you recommend? A. Execute database calls on parallel threads. B. Wrap the database calls in a single transaction scope. C. Use Microsoft Distributed Transaction Coordinator (MSDTC). D. Handle errors resulting from the database calls by using compensatory logic. Answer: D QUESTION 38 You are designing a Windows Azure application. The application includes two web roles and three instances of a worker role. The web roles will send requests to the worker role through one or more Windows Azure Queues. You have the following requirements:- Ensure that each request is processed exactly one time.- Minimize the idle time of

each worker role instance.- Maximize the reliability of request processing. You need to recommend a queue design for sending requests to the worker role. What should you recommend?  
 A. Create a single queue. Send requests on the single queue.  
 B. Create a queue for each web role. Send requests on all queues at the same time.  
 C. Create a queue for each worker role instance. Send requests on each worker queue in a round robin.  
 D. Create a queue for each combination of web roles and worker role instances. Send requests to all worker role instances based on the sending web role.  
 Answer: A  
 QUESTION 39 You need to automate tasks with Azure by using Azure PowerShell workflows. How should you complete the Azure PowerShell script? To answer, drag the appropriate cmdlet to the correct location. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. Select and Place:

**Azure PowerShell cmdlets**

- Checkpoint-Workflow
- New-AzureAutomationRunbook
- Get-AutomationVariable
- Get-AzureAutomationRunbook
- Write-Output "Runbook complete"

**Answer Area**

```

workflow Use-WorkflowCheckpointSample
{
    Set-AutomationVariable -Name 'HasBeenSuspended' -Value $False
    Write-Output "Before Checkpoint"
    _____
    Write-Output "After Checkpoint"
    _____
    if (!$HasBeenSuspended) {
        Set-AutomationVariable -Name 'HasBeenSuspended' -Value $True
        1 + "abc"
    }
    _____
}
                    
```

Answer:

**Azure PowerShell cmdlets**

- New-AzureAutomationRunbook
- \_\_\_\_\_
- Get-AzureAutomationRunbook
- \_\_\_\_\_

**Answer Area**

```

workflow Use-WorkflowCheckpointSample
{
    Set-AutomationVariable -Name 'HasBeenSuspended' -Value $False
    Write-Output "Before Checkpoint"
    _____
    Write-Output "After Checkpoint"
    _____
    Get-AutomationVariable -Name 'HasBeenSuspended'
    if (!$HasBeenSuspended) {
        Set-AutomationVariable -Name 'HasBeenSuspended' -Value $True
        1 + "abc"
    }
    _____
}
                    
```

Explanation: <https://gallery.technet.microsoft.com/scriptcenter/How-to-use-workflow-cd57324f>  
 QUESTION 40 A company uses Azure for several virtual machine (VM) and website workloads. The company plans to assign administrative roles to a specific group of users. You have a resource group named GROUP1 and a virtual machine named VM2. The users have the following responsibilities:

User	Responsibility
Admin1	Control access to VM2
Admin2	Prepare reports with billing and usage information.
Admin3	Maintain all resources in the GROUP1 resource group.

You need to assign the appropriate level of privileges to each of the administrators by using the principle of least privilege. What should you do? To answer, select the appropriate target objects and permission levels in the answer area. Hot Area:

**Answer Area**

Administrator Name	Target
Admin1	<div style="border: 1px solid black; padding: 2px;">                     VM2                      GROUP1                      SUBSCRIPTION                 </div>
Admin2	<div style="border: 1px solid black; padding: 2px;">                     VM2                      GROUP1                      SUBSCRIPTION                 </div>
Admin3	<div style="border: 1px solid black; padding: 2px;">                     VM2                      GROUP1                      SUBSCRIPTION                 </div>

Answer:

Answer Area

Administrator Name	Target Object	Permission Level
Admin1	VM2 GROUP1 SUBSCRIPTION	Reader Owner Contributor
Admin2	VM2 GROUP1 SUBSCRIPTION	Reader Owner Contributor
Admin3	VM2 GROUP1 SUBSCRIPTION	Reader Owner Contributor
